MACTRAP

MACTRAP GREASE BOSS *EASY CLEAN* G5 COMBI COMBI OVEN GREASE REMOVAL UNIT

- Self Cleaning
- Low Profile
- Less Cost
- Integrated Tundish
- Easy Waste Disposal

The Mactrap Grease Boss *Easy Clean* is designed with low cost, low maintenance, restricted kitchen space, and high performance in mind.

The G5 COMBI is specifically designed to address the challenges Combi ovens present, incorporating a very low profile with integrated Tundish.

The Grease Boss Easy Clean is an electromechanical Grease Removal Unit, removing fat, oil and grease (FOG) from wastewater. It incorporates a self-wash cycle to keep the appliance cleaner and help reduce annual servicing costs.

After the FOG is extracted from the wastewater, hot water jets within the unit clean the sides of the tank and move the FOG towards the roller. Another water jet washes the roller, the blade and the FOG chute. The result is a cleaner appliance, operating continuously with very low maintenance.

Very low profile enables waste collection direct from Combi oven outlets

Integrated Tundish simplifies design and reduces plumbing costs

Self-cleaning reduces annual servicing costs

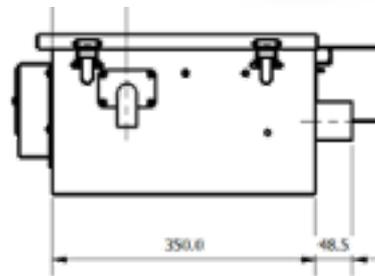

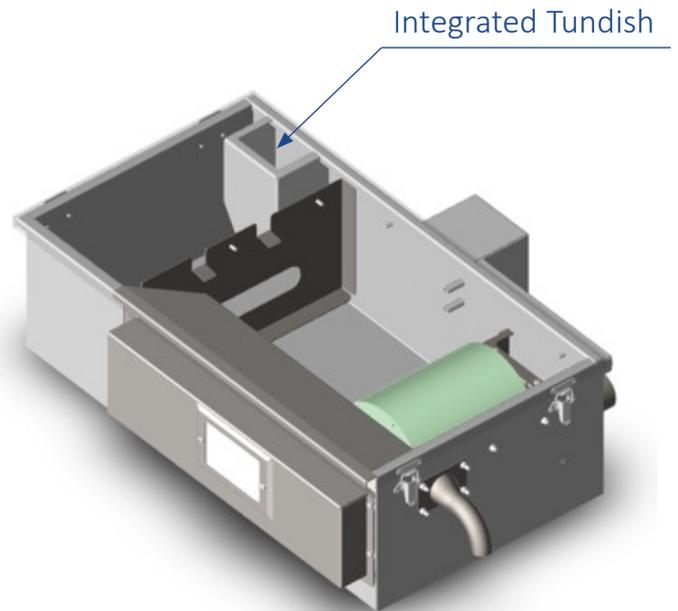

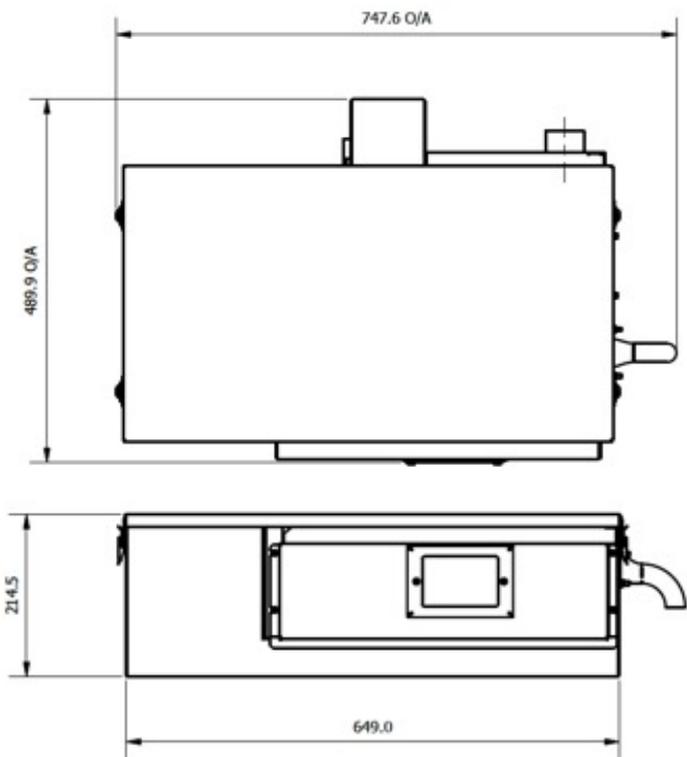

MODEL	LENGTH	WIDTH	HEIGHT	INFLOW
G5	749 mm	495 mm	214 mm	<0.5 l/sec

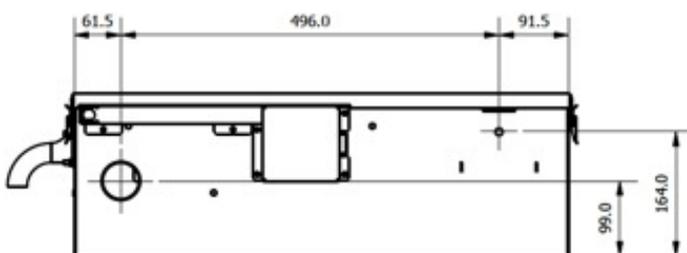

MACTRAP GREASE BOSS *EASY CLEAN* FEATURES
