

# This is KESSEL

Market leading innovative solutions – from one source.

www.kessel.com

### This is **KESSEL**.

Since 1963, KESSEL has stood like no other company for innovative and reliable drainage technology. We have established ourselves as the impulse generator in the industry and are now a worldwide premium supplier.

During the production of our products as well as their operation on-site, we keep quality assurance, environmental protection and worker's safety at the top of our list.

We also place great value in the relationship with our customer, providing consultation, installation support, commissioning and after-sales service.

One thing is certain, our innovation, quality, reliability and service is number one in the industry.

KESSEL - Leading in drainage

KESSEL Headquarters Lenting, Germany

### Leading in drainage.

No matter whether the task involves discharging water, wastewater treatment or backwater protection: if the best solution is required, there is no option but KESSEL.

**Backwater protection** 

Pump technology

Separator technology

Drainage technology

# Backwater protection and pump technology

Backwater valves, lifting stations, hybrid lifting stations and pump stations

- Complete systems consisting of pumps, chambers and controls
- Online alarm and remote monitoring systems

### Keeping your building dry

### Separator technology

HDPE (High Density Polyethylene) grease separators *EasyClean* according to EN 1825

- KESSEL industry leader in polymer drainage products
- Long lasting, corrosion free, low maintenance
- Innovative solutions for difficult applications

### Oil / fuel / coalescence separators *EasyOil* according to DN 858

- Long lasting and watertight
- Easy installation

Starch separators EasyStarch

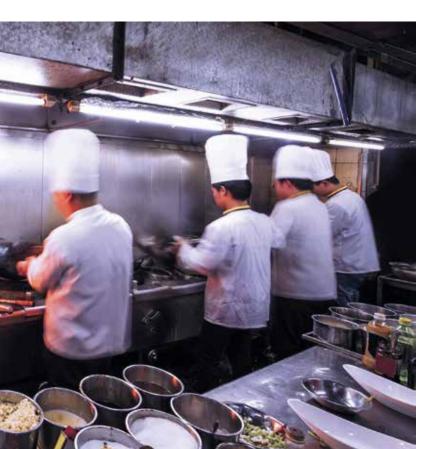

Sediment separators *EasySink* 

### Innovative technology

### for the treatment of grease and oil contaminated wastewater

### Drainage technology

#### Point, linear and wall drainage systems

- Manufactured from polymer, stainless steel and *Ecoguss*
- Fully certified F120 fire protection rating
- The Ultraflat bathroom drain with 63 mm installation height lowest on the market
- Multistop waterless odor trap
- Lock & Lift System cover locking and removal system without screws

Professional and specification fulfilling Building and surface water drainage

### Customized drainage concepts

for project specific requirements

### Individual solutions

#### Full service package

- Technical support
- Design and planning
- Quality check
- On-site assembly
- Commissioning support
- Service and maintenance

### Service support

Design, Product and After-Sales-Service from a single source.

#### Support during the design phase

We provide free support during the design phase to help offer you the most economical and techinically advances drainage solutions..

#### Support during installation

Contact our certified sales partner in your country who can offer specialized installation and commissioning support.

#### Service and maintenance

Certified service and maintenance personnel are available in all markets, contact your KESSEL partner for more information.

#### **Professional development**

Looking to learn more about the specification, installation and service of our products? Seminars are available in your local market or at our KESSEL headquarters in Germany.

# Elbphilharmonie Hamburg

From the car park to the concert hall.

#### **Project requirements**

Strict fire and noise protection requirements

Stability of the processes in the passable area

Reliable discharge of the waste water produced

#### **KESSEL** solutions

Guaranteed to comply with all (fire protection) regulations

High resistance

Uncomplicated project planning

Parking deck drain Ecoguss

Fire protection inser Fire-Kit

# **European Parliament**

The EU trusts in the drainage technology from KESSEL.

#### **Project requirements**

A drainage solution is required for the preparation of more than 1,200 meals per day during sessions.

The complex structure of the building must be taken into account for the installation.

Grease layer thickness must be known at all times.

#### **KESSEL** solutions

The grease separators from KESSEL offer a large collection volume and are therefore well equipped for such high flow operations.

Easy installation of the *EasyClean* grease separator is achieved through the curved separator body.

*SonicControl* level sensing system allows grease layer measurement any time.

SonicControl

## Mall of the Netherlands

The largest shopping centre in the Netherlands.

#### **Project requirements**

Straight forward operation

Underground separator body to be installed in high groundwater area

No odor nuisance during disposal

#### **KESSEL** solutions

The comfort control unit with digital display ensures simple operation

The groundwater resistance of the KESSEL grease separator is guaranteed by a twin walled re-enforced separator body

Fully automatic grease separator disposal with programcontrolled shredder mix system for odorless disposal

Grease separator *EasyClean* ground Auto Mix & Pump

## Altair

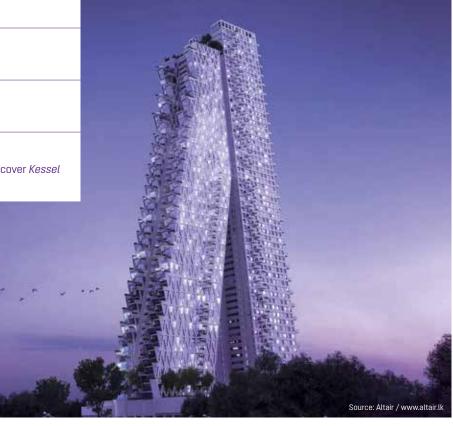

Avant-grade design on the outside. Tried-and-trusted technology on the inside.

**City, country** Colombo, Sri Lanka

Date of completion 2018

Type(s) of building Residential building

**Product(s)** 756x bathroom drain *The Ultraflat* with design cover *Kessel* 

#### **Project requirements**

Minimum installation depth.

High quality demands by the contractor.

Matching the most modern building in Sri Lanka.

#### **KESSEL** solutions

The Ultraflat is the flattest drain on the market.

It guarantees top quality and drainage capacity.

Best technology and perfect aesthetics thanks to the design cover.

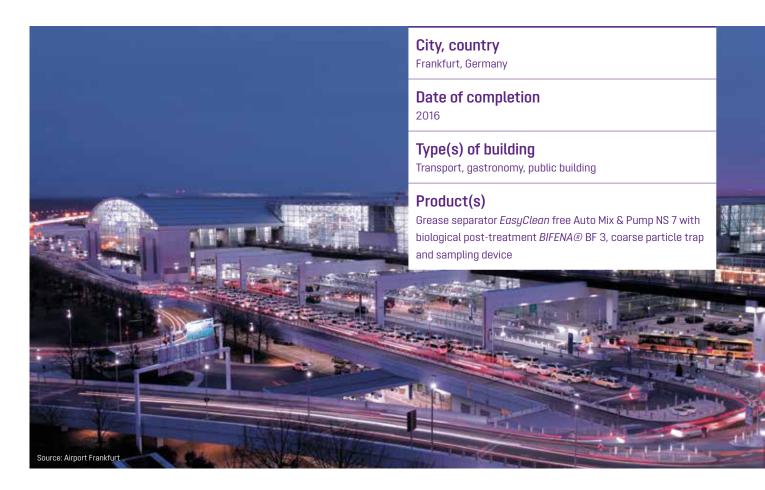

Bathroom drain The Ultraflat

# Zeleni Venac Parking Garage

The best place to park and start exploring Belgrade.

#### **Project requirements**

Strict fire and sound insulation requirements

Long lasting, heavy duty drain covers

Reliable discharge of the wastewater produced

#### **KESSEL** solutions

Guaranteed to comply with all (fire protection) regulations

High resistance, even with aggressive wastewater

Very high flow rate of 4.5 l/s

Flat-roof drains in *Ecoguss* System 200 with pressure sealing flange

Parking deck drain Ecoguss

### **Porto Montenegro**

The leading luxury marina of the Mediterranean – equipped with leading drainage technology.

#### **Project requirements**

Elegant design matching the standard of the apartment complex.

Shower channels with high discharge rate necessary.

Drainage system must prevent against unpleasant odours from the sewer.

#### **KESSEL** solutions

Shower channel in a traditional stainless steel design – in addition the rim of the *Linearis Comfort* can be tiled individually.

The *Linearis Comfort* offers up to 1.1 lit / sec flow rate.

*Multistop* blocks odours, foam, rodents and insects.

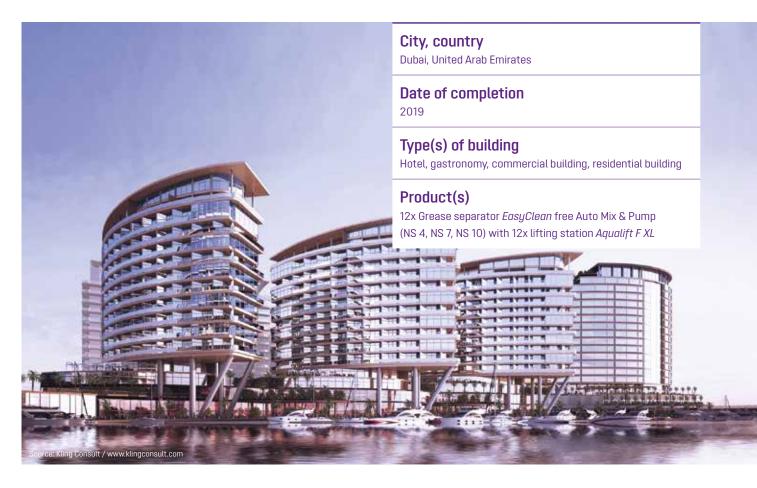

Shower channel Linearis Comfort

# Jewel of the Creek

The building complex of superlatives.

#### **Project requirements**

Easy monitoring of the pumps should be ensured at all times.

Odorless disposal of grease separator contents.

#### **KESSEL** solutions

Monitoring the pump and battery backup is no problem with the KESSEL self-diagnostic system SDS.

The direct disposal by the Shredder-Mix-System, which is used to homogenize the contents of the separator, enables an odorless disposal and easy cleaning.

Grease separator *EasyClean* free Auto Mix & Pump

### Google

The largest Google campus in India

#### **Project requirements**

The grease separator has to be customised to fit in the basement.

A flow rate of 12 - 13 l/s has to be met.

The products must be built from corrosion free material.

#### **KESSEL** solutions

KESSEL offers a wide range of individual solutions. The grease separator tank was adapted to perfectly fit into the room.

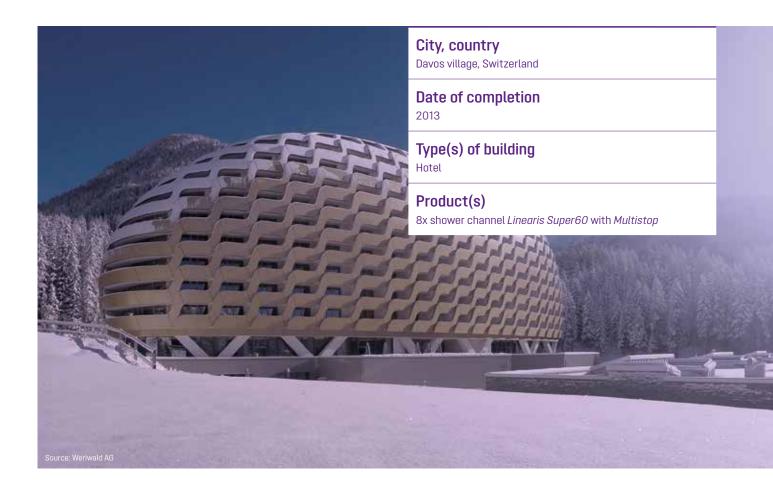

All EasyClean separators are made of polymer, making them durable and renovation-free.

Individual solution of grease separator *EasyClean* free made for customer

## Hotel InterContinental Davos

Designed in a timeless fashion - with drainaige channels to match

#### **Project requirements**

Drains should offer a classic and timeless design.

No unpleasant odours from the drainage system.

Hygiene standards should be guaranteed by simple cleaning of the shower channel.

#### **KESSEL** solutions

The shower channel *Linearis Super60* offers a tileable reversable drain cover offering a stainless steel or tiled 'invisible' look.

The odour stop *Multistop* fulfils the necessary requirements.

Tool-less access makes cleaning quick and easy.

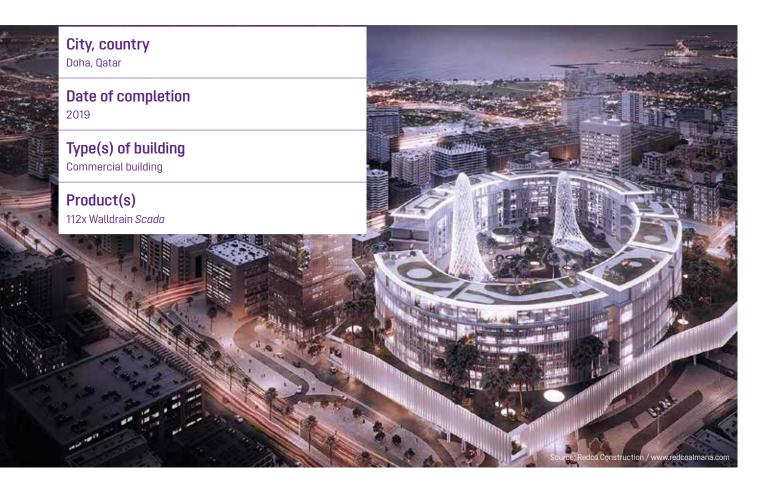

Multistop

# Doha Oasis

Qatar's mixed - used wonder

#### **Project requirements**

Drains with a unique design.

#### **KESSEL** solutions

Walldrain Scada can not only be used in the bathroom – with correct installation it can also be used as a balcony drain.

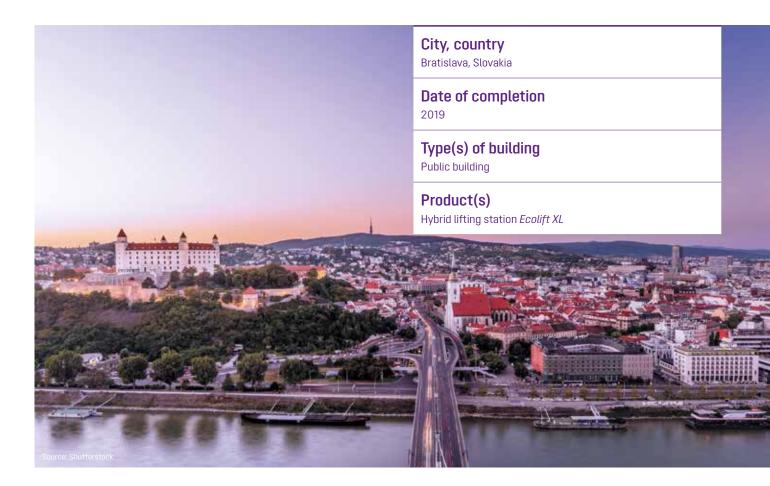

The design award winning walldrain Scada is available with LED colored backlighting included the popular 'rainbow' setting with automated color change.

Walldrain Scada

# **Ministry of Foreign and European Affairs**

Slovakia relies on drainage solutions from KESSEL.

#### **Project requirements**

Drainage solution for installation with a gradient to the sewer

Fail-safe disposal of the wastewater produced

Reliable protection against backwater

#### **KESSEL** solutions

Combines the safety of lifting systems with the advantages of backwater valves

Disposal of wastewater during normal operation without electricity

Offers an innovative chamber system for a wide range of installation heights

Hybrid lifting station Ecolift XL

### **Clinic Dr. Obad**

State-of-the-art technology for patients -behind the scenes technology for the engineers.

#### **Project requirements**

The clinic requires a twin pumping station for additional safety.

A large amount of wastewater has to be dealt with, making a large pumping volume necessary.

#### **KESSEL** solutions

KESSEL lifting stations *Aqualift F* are offered with a secondary back up pump.

The SmartSelect pump selection program chooses the exact pump size and chamber volume to assure that the lifting station is suited for on-site demands.

Lifting station Aqualift F XL Duo

# Syrovarnya & Caspar Restaurant Baku

A new era of dining.

#### **Project requirements**

Suitable grease separators for different areas

Reliable disposal of large quantities of wastewater

Reliable backwater protection

#### **KESSEL** solutions

Coordinated overall system consisting of separator, lifting station and accessories

Comprehensive services from planning to operation of the plant

Adaptation and expansion of the separator system is possible at any time

Grease separator EasyClean free

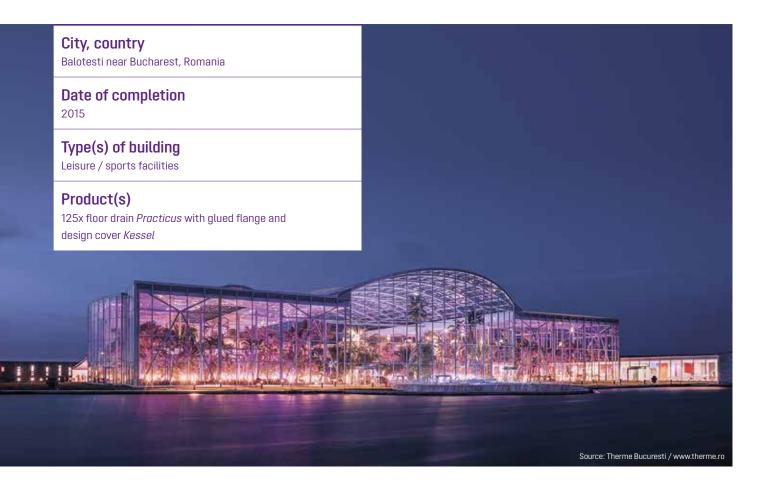

Grease separator Under Sink

Pumping station Aqualift F XL

Backwater pumping station Pumpfix F

### **Therme Bucuresti**

Provide drainage for the largest spa in europe? No problem with KESSEL.

#### **Project requirements**

Attractive design for the drain covers.

High-performance and durable drainage solution.

Drain covers must be lockable.

#### **KESSEL** solutions

KESSEL offers a large selection of aesthetic design covers.

The high-quality drain bodies stand out through a high discharge rate and are equipped with an odour trap in accordance with EN 1253-1.

KESSEL award winning *Lock & Lift* system offers one step unlocking and removal.

Glued flange

Floor drain Practicus

# **Airport Istanbul**

An important hub between Asia, Europe and the Middle East.

#### **Project requirements**

Ensuring odourless disposal

Sustainable wastewater treatment for light liquids in the aviation maintenance areas

Reliable backflow protection for the new airport building

#### **KESSEL** solutions

Odourless emptying and cleaning process in a closed system

Comprehensive services from planning to operation of the plant

Mechanical flaps of the backwater valves prevent rodents from entering the pipe system of the buildings

Grease separator EasyClean free

Backwater valve Staufix Basic

## Lindebjergskolen Hammerum

Climate school in Denmark relies on economic solutions from the market leader.

#### **Project requirements**

Easy access with sufficient space for inspection and maintenance.

High reliability and low operating costs.

#### **KESSEL** solutions

Large diameter chamber with easy access opening provides safe and comfortable working conditions while servicing the system.

The *Ecolift XL* is an economical alternative to traditional lifting stations. Installation, energy usage and wear and tear are kept to a minimum. The SDS (self-diagnosis system) offers high product reliability.

# **Mesheireb Downtown Doha**

Transforming the center of the capital city.

#### **Project requirements**

Custom made grease holding tanks.

7.5 kW grease disposal pumps.

#### **KESSEL** solutions

Flexibility in design and execution of custom made grease holidng tanks.

Custom grease separator pumps to handle lengthy disposal pump run.

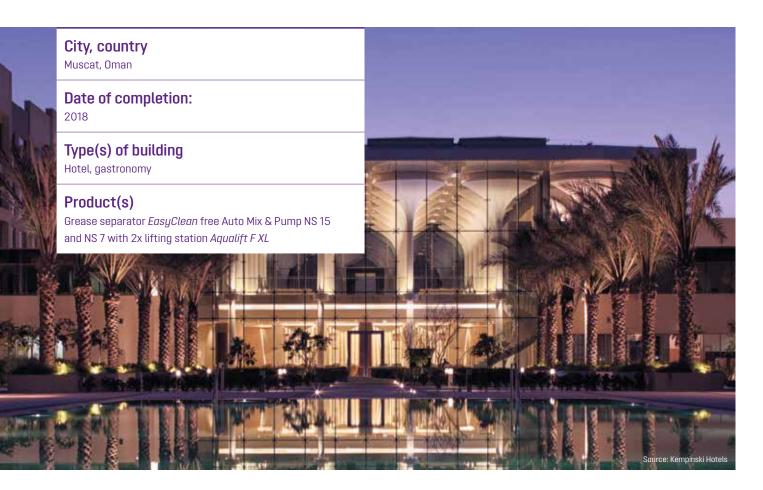

Lifting station Aqualift F Duo

Grease separator *EasyClean* free Auto Mix & Pump

# Kempinski Hotel Muscat

Guaranteed amazing memories

#### **Project requirements**

Customer looking for a complete grease separator and lifting station system solution from a single source.

Flexibility in execution is neccesary.

#### **KESSEL** solutions

KESSEL offers complete separator packages constisting of grease separator, properly matched lifting station and advantageous accessories.

The lifting stations and the grease separators offer large storage capacities but still are ideal for rooms with a very narrow access.

Lifting station Aqualift F XL

### **Belgrade Waterfront**

Restaurant wastewater handled by largest single tank grease separator in the world.

### The Serbian district Belgrade Waterfront relies on KESSEL drainage solutions that are "made in Germany"

The new urban centre Belgrade Waterfront is located right in the heart of the Serbian capital, covering an area of one million square metres. This unique district, which stretches along the picturesque banks of the Sava River, already gives an impression of the future of modern living. Here, the focus is on creating a pleasant, functional and elegant space to live and work with numerous leisure activities, such as shopping centres or restaurants. More than 50 different speciality restaurants and an extra large food court are the source of a significant quantity of wastewater containing grease, oil and food waste. In order handle these large volumes of wasteater - a total of 235 litres per second, the demands made on the grease separator system were incredibly high. A total of ten KESSEL EasyClean free Auto Mix & Pump grease separators in different sizes and downstream Aqualift F XL lifting stations were installed together with the largest grease separator system in the world with a nominal size of 50 (max. 50 l/s) to provide a powerful and safe solution.

### Better quality of life and work in a neighbourhood close to the river in the centre of Belgrade

Back in 2014, the Serbian Government and Eagle Hills, one of the leading private investment and development companies, initiated this project to create a new city centre in the rising European capital. Belgrade Waterfront follows the idea that the urban areas of Belgrade are closer to the rivers. The residents living in this district enjoy life on the banks of the river while at the same time being close to the city centre. Various restaurants and streets lined with eateries, which invite people to while away the time, provide the necessary food for the locals and tourists. If the greasy wastewater that they produce is discharged untreated into the public sewer system, grease and food residues are deposited in the drainage pipes. This can lead to considerable damage and the build-up of corrosion and odours as well as blockages. As Belgrade Waterfront is full of restaurants, the challenge was to find a large-capacity grease separator system that can reliably handle these volumes.

Exceptional custom-made products for high volumes of wastewater The responsible parties had already envisioned an initial device solution for the project. KESSEL AG specialises in individual custom-made solutions and offered a special alternative to the original proposal - with success. Together with their Serbian trading partner Hydrosol, the drainage specialist convinced the responsible planner, the construction company, the project manager as well as ultimately the supervisory authorities and the investor Eagle Hills of the performance of large, decentralised grease separator systems with a software-controlled, fully automated disposal and rinsing system. These also save space and costs and protect the environment. In total, the company supplied ten *EasyClean* free Auto Mix & Pump grease separators. The respective dimensioning was based on the predefined inflows. The restaurants were grouped together for this purpose. In order to cope with these enormous volumes of greasy wastewater, the company not only created the largest grease separators in the history of KESSEL for the project, but also the largest grease separator in the world to date, with a nominal size of 50.

### A challenging initial situation resolved to the satisfaction of all parties involved

The "Individual Solutions" department at KESSEL had to overcome various challenges during the project: it had to find technical solutions for grease separators with a sufficiently large capacity. KESSEL impressed here, for example, with grease separator systems in nominal sizes of 40 and 50 a single tank systems. Since the respective set-up locations of the separators are located below the backwater level, the wastewater cannot flow into the sewage system via gravity. For this reason, additional downstream *Aqualift F XL* lifting stations are used, whose performance had to be precisely adapted to the water volumes involved. In cooperation with Hydrosol, it was also necessary to optimise the positioning of the devices according to the groups of restaurants and to provide

high-quality pipes, connections and efficient ventilation of the system. "I am particularly proud of the way in which this project progressed. Throughout the entire project, we implemented every change in installation planning with regard to design and costs within a few days. This meant that our partner Hydrosol from Belgrade was kept up to speed with the latest project status and could provide information at every project meeting", explains Martin Jais, a member of the Export Product Management team at KESSEL. "It was precisely this shared product and market competence that was the key to the successful implementation of the project." Each solution offered was explained logically and in detail, including the tested product properties and certification. Ultimately, all participants benefitted from this: the planners were given a system solution that meets all the requirements. As KESSEL supplied automated grease separators with a high capacity in one system, this simplified the installation procedure for the building contractor – and the investors can rely on the fact that the wastewater produced is properly treated and reliably discharged in an environmentally friendly manner.

### No odour emissions thanks to a program-controlled disposal and rinsing system

The grease separators, which are designed to meet the specific requirements, have a program-controlled, fully automated disposal and rinsing system known as the "Shredder-Mix-System". The contaminated wastewater from the restaurants and food courts is routed into the system where it is slowed down by a deflector plate. In slow-flow tanks, substances that are heavier than water sink to the bottom and settle in the sludge trap. Grease and oil rise to the top and form a grease layer that is retained between the inlet and outlet. The grease and sludge layer is disposed of with a closed tank through the direct disposal pipes permanently installed on site using the system's own pumps. The "Shredder-Mix-System" enables the circulation

Surpassing themselves for success: the company not only created the largest grease separators in the history of KESSEL during the project, but also the largest grease separator in the world with a nominal size of 50 (max. 50l/s). (Source: KESSEL AG)

and comminution of the contents of the tank and provides for odourless cleaning of the separators. For future maintenance, the software control enables fine-tuning for each step of the cleaning and maintenance process. In addition, the *SonicControl* automatic grease layer thickness measuring device with an ultrasound sensor independently takes over the precise monitoring of the temperature and layer thickness in the grease separators. The owner-operator can therefore verify the actual quantity of grease that they produce to the relevant authorities and optimise the necessary disposal cycles outside of the standard requirements.

#### High-performance pumps for reliable drainage at all times

The treated effluent of all grease separators was located below the backwater level, meaning lifting stations were needed to pump this wastewater into the local sewer system - for this the Aqualift FXL twin lifting stations (models 3000, 4500 and 5500) were chosen. These systems were also dimensioned according to the calculated inflow and the pressure pipes were designed accordingly. In order to be able to reliably derive the variable inflow rates, some lifting stations are equipped with two or three pumps running in parallel, which can all be controlled centrally together. This mode of operation increases safety and saves the owner-operator additional costs. The pumps were installed in either one or two 450-litre tanks connected to each other. "With this technical custom-made solution, the large volumes of wastewater generated at the Belgrade Waterfront can be safely disposed of through the pressure pipe", stresses Martin Jais. The commissioning and software settings will be carried out on the system by the specialists at KESSEL in summer 2020.

The respective dimensioning of the grease separators was based on the predefined inflows. The restaurants were grouped together for this purpose. (Source: KESSEL AG)

Subject to technical modifications.
