

# HAIR TRAP

HAIR CAPTURE FOR HAIR SALONS & PET GROOMERS

Under Bench or External Installation

## PROTECTING THE ENVIRONMENT

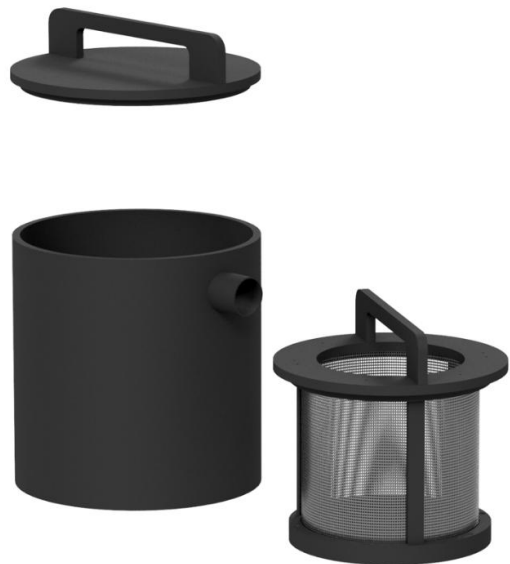

Wastewater from hairdressing wash basins and pet grooming facilities contain hair, debris and dirt that requires a filter and sediment interceptor to prevent them escaping to the sewer and accumulating with fat, grease and wet wipes to block city pipes.

## HAIR TRAP

A Hair Trap is for the collection of hair that may be washed from hair dressing salons' hair wash basins. This trap has a small removable straining bucket and will need to be cleared once a week.

Hair traps must be checked and maintained regularly to ensure trouble-free service. They are designed to filter hair and/or larger particles passing through the trap via a mesh filter basket inside the tank. Over time, the basket will become filled with hair and must be removed, emptied, cleaned thoroughly and replaced to ensure correct function of the trap. Small particles will collect at the bottom of the trap and require flushing or manual removal.

- Designed and manufactured in New Zealand
- Designed for easy access to filter basket
- Quality construction made from high density polyethylene (HDPE) and stainless steel
- Above ground or external installation.

## INSTALLATION

The Hair Trap is installed in-line between the hair wash basins and the sewer or trade waste discharge.

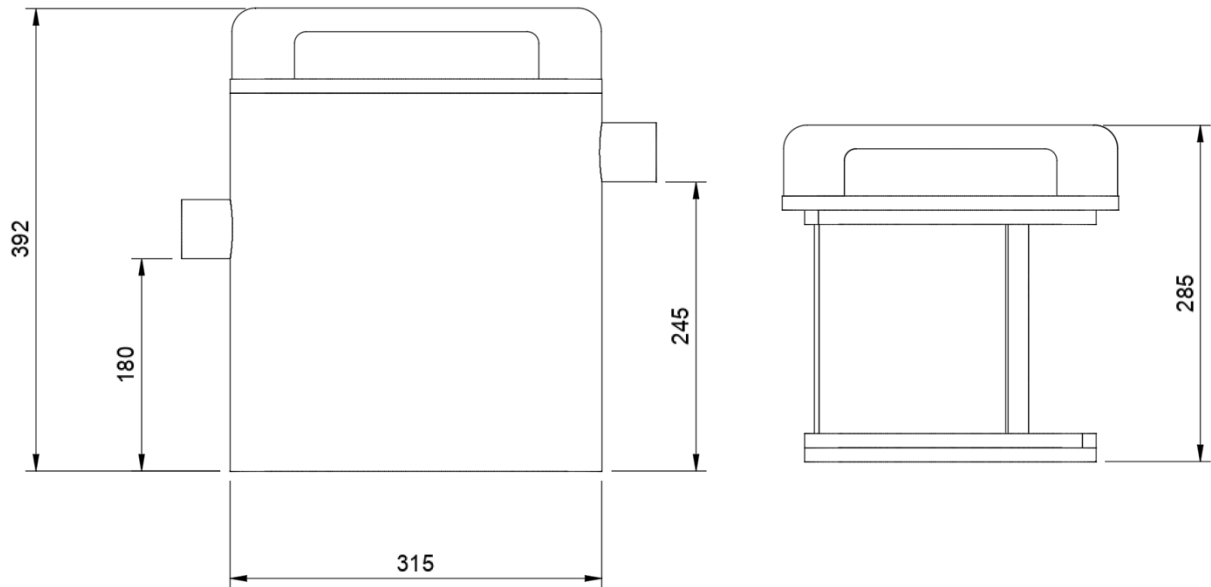

Ensure at least 300mm of clear space is available above the Hair Trap for removal of the filter basket.

Designed for 1-3 sinks (larger models for 4-8 sinks available).

## DIMENSIONS

## WARRANTY

The Mactrap Polymer Hair Trap is warranted for impermeability, fitness for use and structural stability for five (5) years. The manufactured unit is warranted for quality of manufacture for one (1) year provided the separator is installed and operated in accordance with the specifications provided with each unit. Mactrap warranty does not include maintenance and servicing of the Hair Trap.
